The NAV drops in direct relationship to the dividend paid, plus or minus market movement. For example, if a fund has a \$10.00 NAV and pays a \$0.25 dividend, the stated NAV will be \$9.75 if there is no market movement. The day's market movement will be added or subtracted to the \$9.75 NAV. The Shareholder will either receive more shares of the fund if dividend reinvestment is selected or take the distribution in cash.
