

Driehaus Multi-Asset Growth Economies Fund

KEY OBJECTIVES

- Provide superior risk-adjusted returns and higher total return than the MSCI Emerging Markets Index over a full market cycle by investing across the emerging markets asset class
- Flexible structure that allows the fund to benefit from positive and negative developments across multiple markets
- Employs multiple trade-types to manage risk, correlation and volatility.

INCEPTION DATE

April 10, 2017

FUND ASSETS UNDER MANAGEMENT

\$32 million

FIRM ASSETS UNDER MANAGEMENT

\$6.5 billion

MARKET OVERVIEW

Global markets suffered rising volatility that triggered a sharp sell-off in the final quarter of 2018. Risk sentiment was dampened by several issues including: a slowdown in global growth, high corporate leverage in the US, the US Federal Reserve continuing to tighten and the trade war with China. The US government shutdown was an unwelcome, but fitting, finale to close out the year.

PERFORMANCE REVIEW

In the fourth quarter of 2018, the Driehaus Multi-Asset Growth Economies Fund lost 5.08%,¹ outperforming the MSCI Emerging Markets Index (-7.47%) but underperforming the blended benchmark of the equally weighted MSCI Emerging Markets Index and the JPMorgan Global Bond Index Emerging Markets Global Diversified (-2.73%) during the same period. The fund was harmed by an overweight allocation in Chinese and Indian equities and a relative allocation in EM fixed income as compared to equities. The fixed income positions in the fund performed well in the quarter as global interest rates fell with increasingly negative data points regarding global growth.

China was the fund's largest country detractor during the quarter principally due to the fund's equity exposure. A combination of domestic and external issues contributed to another disappointing quarter for equity

market performance. Poor domestic data, a slowdown in trade, further deterioration in the tech cycle and the prolonged geopolitical issues were the primary reasons for the weakness. Outside of macro-driven weakness, the fund was weighed down by its exposure in the internet and technology sectors. Going forward, we see valuations in our favored companies in China as being attractive and see the market being supported by coordinated fiscal and monetary easing. We further see the risk premium associated with Chinese assets as falling with less pressure on the currency and a more amicable outlook for trade negotiations with the US. We see the central question for Chinese assets going forward being the extent to which this easing of policy and amelioration in trade discussions can stem the economic downturn.

Within equities, Indonesia was the fund's top contributing market, driven by both country allocation and stock selection. On the stock specific side, we benefitted from overweight allocation to two companies in the financials and telecommunications sectors. We remain constructive on Indonesian assets as growth fundamentals continue to improve alongside less pressure from rates after 175 basis points of tightening earlier in the year. Growth will remain solid into the elections this spring and we expect interest rates to remain anchored by low inflation, low oil, and a more dovish Federal Reserve. The

¹Performance Disclosure

The performance data shown represents past performance and does not guarantee future results. Current performance may be lower or higher than the performance data quoted. Principal value and investment returns will fluctuate so that investors' shares, when redeemed, may be worth more or less than their original cost. The fund will charge a redemption fee of 2.00% on shares held less than 60 days. Performance data represents the rate that an investor would have earned (or lost) on an investment in the fund (assuming reinvestment of all dividends and distributions). Average annual total return reflects annualized change, while cumulative total return reflects aggregate change. Since fund performance is subject to change after the month-end, please call (877) 779-0079 or visit www.driehaus.com for more current performance information. Sources: Driehaus Capital Management LLC, Factset, Reuters and MSCI Indices

incumbent president is universally expected to win the election so any deviation from that outcome would prove to be a risk. Beyond Indonesia, the Philippines was the second largest contributor, with returns coming solely from one position in the financial sector. A combination of attractive valuation, improving interest rate margins, and an acceleration in credit contributed to the outperformance. Going forward, we remain constructive on the Philippines.

As mentioned previously, China was the largest detractor from equity performance. Mexico came in second due to a reversal of the euphoria we saw in the second and third quarters following the presidential election. However, this reversal did not come without provocation. The new president and his administration began to vocalize questionable policy initiatives around banking, pensions, energy sector, airport construction among others. The fund's exposures in the consumer and financials sectors were detractors. Before the end of the year we were increasing our exposure in Mexico on what we found to be very attractive valuations in both fixed income and equities. While we enjoyed the opportunity to tactically add exposure, we are cautious on the longer-term political outlook and remain slightly underweight.

Within fixed income, our top performing active allocation was Egypt for the fourth straight quarter. We remain constructive given the retrace of inflation back into the tolerance band and recent uptick of foreign buying within the fixed income space. We continue to watch foreign exchange (FX) reserves for signs of stress, but we are currently comfortable with the reserve adequacy. With the upcoming year looking better for both monetary policy and growth, we remain positive. Our constructive view isn't solely in fixed income. It pertains to equities as well.

On the passive front, our underweights in several fixed income markets hurt us during the fourth quarter. As previously mentioned, global rates experienced quite a rally to end the year. The combination of lower oil, an increasingly dovish Federal Reserve, and poor global data lead to a duration grab in almost all markets. Curves bull flattened everywhere. There were significant rallies in markets we had fortunately avoided throughout the year, like Turkey, as risk receded. Given this as well as our relative allocation is higher to equities, we lagged our blended benchmark but benefited relative to an equity-only portfolio.

OUTLOOK

Going into 2019, we are more constructive on emerging market assets. While the growth outlook is currently poor, we think many countries have priced in this slowdown and we see a higher likelihood that policy support begins to reverse what was a steady deterioration in earnings throughout 2018. We further see increased dispersion across countries and asset classes. Given very different growth outlooks across countries, we see opportunities in both equities and fixed income in different geographies. In short, we think this will be another year where the flexibility provided by a multi-asset approach to emerging markets will generate value for investors.

ANNUAL FUND OPERATING EXPENSES³

Gross Expenses	2.06
Net Expenses	1.77

Sources: Driehaus Capital Management LLC, Morgan Stanley Capital International Inc., SS&C Inc.

The performance data shown represents past performance and does not guarantee future results. Current performance may be lower or higher than the performance data quoted. Principal value and investment returns will fluctuate so that investors' shares, when redeemed, may be worth more or less than their original cost. The Fund will charge a redemption fee of 2.00% on shares held less than 60 days. Performance data represents the rate that an investor would have earned (or lost), during the given month, on an investment in the Fund (assuming reinvestment of all dividends and distributions). Average annual total return reflects annualized change. Since Fund performance is subject to change after the month-end, please call (877) 779-0079 or visit www.driehaus.com for more current performance information.

*Average Annual Total Return

¹The equally weighted benchmark consists of 50 percent of the MSCI Emerging Market Index (ND) and 50 percent of the JPMorgan GBI Emerging Markets Global Diversified. JPMorgan Global Bond Index Emerging Markets Global Diversified tracks debt instruments in the emerging markets (includes a broader array of countries than the EMBI Plus).

²The Morgan Stanley Capital International Emerging Markets Index (MSCI Emerging Markets Index) is a market capitalization-weighted index designed to measure equity market performance in global emerging markets. Data is in US Dollars. The net dividend (ND) index is calculated with net dividend reinvestment.

³Represents the Annual Fund Operating Expenses as disclosed in the current prospectus dated April 30, 2018. It is important to understand that a decline in the Fund's average net assets due to unprecedented market volatility or other factors could cause the Fund's expense ratio for the current fiscal year to be higher than the expense information presented. A shareholder may be required to pay a commission to their financial intermediary. Driehaus Capital Management LLC, the Fund's investment adviser, has entered into a contractual agreement to cap the Fund's ordinary annual operating expenses at 1.75% of average daily net assets until the earlier of the termination of the investment advisory agreement, by the Board of Trustees or the Fund's shareholders, or April 9, 2020. The expense cap excludes interest, taxes, brokerage commissions, dividends and interest on short sales, other investment-related expenses, acquired fund fees and expenses, and extraordinary expenses, such as litigation and other expenses not incurred in the ordinary course of the Fund's business, resulting in the current net expense ratio of 1.77%. Pursuant to the agreement, and so long as the investment advisory agreement is in place, for a period of three years subsequent to the Fund's commencement of operations on April 10, 2017, the investment adviser is entitled to reimbursement for previously waived fees and reimbursed expenses to the extent that the Fund's expense ratio remains below the operating expense cap that was in place at the time of the waiver/expense reimbursement as well as the existing operating expense cap.

ASSET WEIGHTS

Source: Driehaus Capital Management LLC
Data as of 12/31/18.

The Fund invests in foreign securities, including small and mid cap stocks, which may be subject to greater volatility than other investments. During certain periods, the Fund has benefited from unusually strong market conditions. At times, a significant portion of a Fund's return may be attributable to investments in initial public offerings (IPOs) or concentrations in certain strong performing sectors, such as technology. Returns from IPOs or sector concentrations may not be repeated or consistently achieved in the future. In addition, participating in IPOs and other investments during favorable market conditions may enhance the performance of a Fund with a smaller asset base, and the Fund may not experience similar performance results as its assets grow. Investments in overseas markets can pose more risks than U.S. investments, and the Fund's share prices are expected to be more volatile than that of a U.S.-only fund. In addition, the Fund's returns will fluctuate with changes in stock market conditions, currency values, interest rates, foreign government regulations, and economic and political conditions in countries in which the Fund invests. These risks are generally greater when investing in emerging markets. These and other risk considerations are discussed in the Fund's prospectus.

TERMS: Portfolio Yield is the annual income (interest or dividends) divided by the current price of the security, aggregated to the portfolio level. **Effective duration** is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. **Portfolio Yield** is the income return on an investment, such as the interest or dividends received from holding a particular security.

Please consider the investment objectives, risks, fees and expenses of the Fund carefully prior to investing. The prospectus and summary prospectus contain this and other important information about the Fund. To obtain a copy of the prospectus and/or summary prospectus, please call us at (877) 779-0079. Please read the prospectus and summary prospectus carefully before investing.
