

# DEVDX Performance Review

---

During the month of April, the fund returned 1.52%.<sup>1</sup> Equity markets continued their climb higher throughout the month, and credit markets remained tame as investors continued to gain comfort with the lower growth and palatable inflation backdrop. The fund's return composition was broad based, with no single holding contributing more than 39 basis points, and no single detractor greater than 29 basis points. Additionally, the portfolio was able to achieve positive returns in each investment category, including portfolio hedges.

April saw a mixed bag in terms of deal activity, with one specific deal in the telecommunications space experiencing heightened scrutiny from regulators. This trend of contentious, high profile deals, facing litigious twists and turns on the public stage has become an increasingly frequent part of the merger arbitrage process in the past few years. The fund generally tends to shy away from these situations due to limited visibility into regulators' process and minimal, if any, informational edge along the way. The fund does seek to capitalize on these situations when the sentiment pendulum has overshot one way or another, and as such, we continue to keep a close eye on these higher profile situations.

April also continued the trend of rumored leverage buyouts ("LBOs") activity as private sponsors, flush with capital, look for their next targets. This has been especially pronounced in the technology, media, and telecom space ("TMT") where the fund has current holdings that are prime candidates, as well as a short list of companies that we have vetted and are ready to invest in, if the opportunity dictates.

The fund's portfolio hedges category was the largest contributor for the month at 68 basis points, led by industry hedges in the healthcare, biotech, and financials space. The fund continues to employ industry hedges to offset unwanted exposures, allowing us to focus on idiosyncratic risk, while minimizing downside volatility.

The bond with catalyst strategy contributed 64 basis points to performance for the month. The largest impact in the category was from a telecommunications company that prudently eliminated its dividend to address its capital structure, contributing 31 basis points. The other top contributor in the category was a digital communications company that is in the process of putting itself up for sale via an auction, contributing 21 basis points. The category had one material detractor for the month, a hybrid position in the credit of an investment grade air leasing company, that experienced selling pressure due to the move in interest rates, detracting 21 basis points.

The equity catalyst strategy contributed 37 basis points to performance for the month. The largest impact in the category was from a life insurance and annuity company that provided the street an update to their go to market strategy, contributing 39 basis points to performance. The other material contributor in the category was the IPO of a therapeutics company in phase one, focusing on kinase inhibitors in the oncology space, 31 basis points. As mentioned, no individual holding detracted greater than 29 basis points during the month, and the category's largest detractors accounted for -29 basis points, -26 basis points, and -22 basis points.

A third of the way through the year, the fund continues to build on the strong start to the year, with an emphasis on our repeatable process. With a three-month correlation to broader markets of 50% and a beta roughly half that of the S&P, we continue to carve out an idiosyncratic and unique path to the return profile for the fund. The current opportunity set remains compelling across both equity and credit opportunities, and we are encouraged by the level of activity in the event space.

---

## <sup>1</sup>Performance Disclosure

The performance data shown represents past performance and does not guarantee future results. Current performance may be lower or higher than the performance data quoted. Principal value and investment returns will fluctuate so that investors' shares, when redeemed, may be worth more or less than their original cost.

Performance data represents the rate that an investor would have earned (or lost), during the given month, on an investment in the Fund (assuming reinvestment of all dividends and distributions). Average annual total return reflects annualized change.

Since Fund performance is subject to change after the month-end, please call (877) 779-0079 or visit [www.driehaus.com](http://www.driehaus.com) for more current performance information.

### Performance Disclosure

The performance data shown represents past performance and does not guarantee future results. Current performance may be lower or higher than the performance data quoted. Principal value and investment returns will fluctuate so that investors' shares, when redeemed, may be worth more or less than their original cost. Performance data represents the rate that an investor would have earned (or lost), during the given month, on an investment in the Fund (assuming reinvestment of all dividends and distributions). Average annual total return reflects annualized change. **Since Fund performance is subject to change after the month-end, please call (877) 779-0079 or visit [www.driehaus.com](http://www.driehaus.com) for more current performance information.**

<sup>1</sup>The Driehaus Event Driven Fund has an inception date of August 26, 2013. <sup>2</sup>The Standard & Poor's ("S&P") 500 Index consists of 500 stocks chosen for market size, liquidity, and industry group. It is a market-weighted index (stock price times number of shares outstanding), with each stock's weight in the index proportionate to its market value. <sup>3</sup>The FTSE 3-Month T-Bill Index is designed to mirror the performance of the 3-Month U.S. Treasury Bill. The FTSE 3-Month T-Bill Index is unmanaged and its returns include reinvested dividends. <sup>4</sup>Represents the Annual Fund Operating Expenses as disclosed in the current prospectus dated April 30, 2019. It is important to understand that a decline in the Fund's average net assets due to unprecedented market volatility or other factors could cause the Fund's expense ratio for the current fiscal year to be higher than the expense information presented. A shareholder may be required to pay a commission to their financial intermediary.

Investments in overseas markets can pose more risks than U.S. investments, and share prices are expected to be more volatile than that of a U.S.-only fund. The Driehaus Event Driven Fund invests in foreign securities, including small and mid cap stocks, which may be subject to greater volatility than other investments. In addition, returns of this Fund will fluctuate with changes in stock market conditions, currency values, interest rates, foreign government regulations, and economic and political conditions in countries in which this Fund invests. These risks are generally greater when investing in emerging markets. These and other risk considerations are discussed in the prospectus for this Fund. At times, a significant portion of the Fund's return may be attributable to investments in initial public offerings (IPOs) or concentrations in certain strong performing

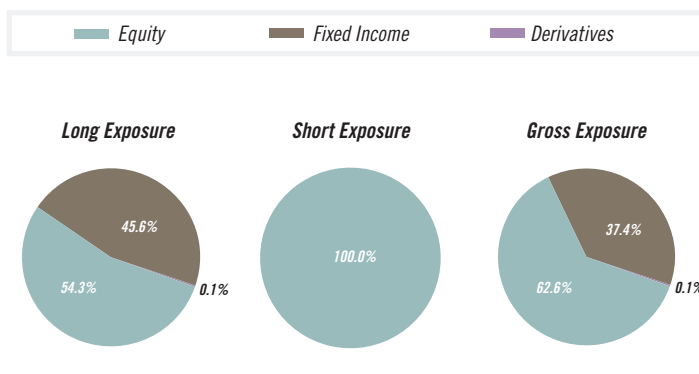

sectors, such as technology. Returns from IPOs or sector concentrations may not be repeated or consistently achieved in the future. In addition, participating in IPOs and other investments during favorable market conditions may enhance the performance of a Fund with a smaller asset base, and this Fund may not experience similar performance results as its assets grow. Stocks of medium-sized companies tend to be more volatile in price than those of larger companies and may have underperformed the stocks of small and large companies during some periods. In addition, investments in medium-sized companies may be more susceptible to particular economic events or competitive factors than are larger, more broadly diversified companies. Growth stocks may involve special risks and their prices may be more volatile than the overall market. The Fund, in addition to investing in unrated and investment grade bonds, may also invest in junk bonds, which involve greater credit risk, including the risk of default. The prices of high yield bonds are more sensitive to changing economic conditions and can fall dramatically in response to negative news about the issuer or its industry, or the economy in general. The use of derivatives involves risks different from, and possibly greater than, the risks associated with investing directly in the underlying assets. Derivatives can be highly volatile, illiquid and difficult to value, and there is a risk that changes in the value of a derivative held by the Fund will not correlate with the Fund's other investments. Further, the Fund may invest in derivatives for speculative purposes. Gains or losses from speculative positions in a derivative may be much greater than the derivative's original cost and potential losses may be substantial. The Fund may make short sales. Short sales expose the Fund to the risk of loss. No investment strategy, including an absolute return strategy, can ensure a profit or protect against loss. Additionally, investing in an absolute return strategy may lead to underperforming results during an upward moving market. When interest rates increase, bond prices decrease and bond funds become more volatile. It is anticipated that the Fund will experience high rates of portfolio turnover, which may result in payment by the Fund of above-average transaction costs. This is a nondiversified fund compared to other funds, the Fund may invest a greater percentage of assets in a particular issuer or a small number of issuers. As a consequence, the Fund may be subject to greater risks and larger losses than diversified funds.

\*Exposure: please note exposure may be different than market value. For equities, bonds, foreign exchange forwards and interest rate swap products, exposure is the same as market value. For options, exposure represents delta-adjusted underlying exposure. For credit default swap and credit default swap indices, exposure represents bond equivalent exposure.

\*\*Estimated expenses for the month (not annualized) as a percentage of the fund's net assets for the month. Interest on cash balances are netted against fund expenses.

<sup>1</sup> The Standard & Poor's ("S&P") 500 Index consists of 500 stocks chosen for market size, liquidity, and industry group. It is a market-weighted index (stock price times number of shares outstanding), with each stock's weight in the index proportionate to its market value.

## Notes

Investments in overseas markets can pose more risks than U.S. investments, and share prices are expected to be more volatile than that of a U.S.-only fund. The Driehaus Event Driven Fund invests in foreign securities, including small and mid cap stocks, which may be subject to greater volatility than other investments. In addition, returns of this Fund will fluctuate with changes in stock market conditions, currency values, interest rates, foreign government regulations, and economic and political conditions in countries in which this Fund invests. These risks are generally greater when investing in emerging markets. These and other risk considerations are discussed in the prospectus for this Fund. At times, a significant portion of the Fund's return may be attributable to investments in initial public offerings (IPOs) or concentrations in certain strong performing sectors, such as technology. Returns from IPOs or sector concentrations may not be repeated or consistently achieved in the future. In addition, participating in IPOs and other investments during favorable market conditions may enhance the performance of a Fund with a smaller asset base, and this Fund may not experience similar performance results as its assets grow. Stocks of medium-sized companies tend to be more volatile in price than those of larger companies and may have underperformed the stocks of small and large companies during some periods. In addition, investments in medium-sized companies may be more susceptible to particular economic events or competitive factors than are larger, more broadly diversified companies. Growth stocks may involve special risks and their prices may be more volatile than the overall market. The Fund, in addition to investing in unrated and investment grade bonds, may also invest in junk bonds, which involve greater credit risk, including the risk of default. The prices of high yield bonds are more sensitive to changing economic conditions and can fall dramatically in response to negative news about the issuer or its industry, or the economy in general. The use of derivatives involves risks different from, and possibly greater than, the risks associated with investing directly in the underlying assets. Derivatives can be highly volatile, illiquid and difficult to value, and there is a risk that changes in the value of a derivative held by the Fund will not correlate with the Fund's other investments. Further, the Fund may invest in derivatives for speculative purposes. Gains or losses from speculative positions in a derivative may be much greater than the derivative's original cost and potential losses may be substantial. The Fund may make short sales.

Short sales expose the Fund to the risk of loss. No investment strategy, including an absolute return strategy, can ensure a profit or protect against loss. Additionally, investing in an absolute return strategy may lead to underperforming results during an upward moving market. When interest rates increase, bond prices decrease and bond funds become more volatile. It is anticipated that the Fund will experience high rates of portfolio turnover, which may result in payment by the Fund of above-average transaction costs. This is a nondiversified fund compared to other funds, the Fund may invest a greater percentage of assets in a particular issuer or a small number of issuers. As a consequence, the Fund may be subject to greater risks and larger losses than diversified funds.

## FUND INFORMATION

### Types of events in which the fund frequently invests include:

**Corporate action:** Changes to the company's strategy or capital structure as a result of mergers, acquisitions, spin-offs, lawsuits, etc.

**Earnings:** A trade involving an upside or downside surprise to earnings versus market expectations.

**Market dislocation:** Any mispricing of a security for a non-fundamental reason.

**Product cycle:** A key change to the company's product/service offering, or a change in customer preferences for the company's product/service.

**Restructuring:** A change to the company's capital structure or business prospects as a result of bankruptcy, reorganization or corporate distress.

### Types of trades in which the fund frequently invests include:

**Bond catalyst driven:** Event-driven trades that are expressed predominantly through bond positions.

**Deep value:** Trade that attempts to capture the mispricing of an extremely undervalued security.

**Equity catalyst driven:** Event-driven trades that are expressed predominantly through equity positions.

**Portfolio hedge:** A hedge to an unwanted factor exposure, such as equity, volatility, credit or interest rate risk.

**Risk arbitrage:** Trades that attempt to capture a valuation discrepancy between similar securities.

## DEFINITIONS OF KEY TERMS

**Average % of Par – Long Credit** - The average dollar price of a bond the Fund is long as a percentage of par.

**Average % of Par – Short Credit** - The average dollar price of a bond the Fund is short as a percentage of par.

**Beta** - A measure describing the relation of a portfolio's returns with that of the financial market as a whole. A portfolio with a beta of 0 means that its price is not at all correlated with the market. A positive beta means that the portfolio generally follows the market. A negative beta shows that the portfolio inversely follows the market; the portfolio generally decreases in value if the market goes up and vice versa.

**Credit Default Swap (CDS)** - A contract in which the buyer of the CDS makes a series of payments to the seller and, in exchange, receives a payoff if a credit instrument (typically a bond or loan) goes into default. In its simplest form, a credit default swap is a bilateral contract between the buyer and seller of protection.

**Delta** - The ratio that compares the change in the price of a derivative to the corresponding change in the price of an underlying asset.

**Derivatives Premium** – Value of a derivatives contract.

**Effective Duration** - A duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change.

**Equity Gamma** - The ratio that compares the rate of change for the delta with respect to the underlying asset's price.

**Portfolio Coupon** - The annualized interest earned for the portfolio.

**Portfolio Current Yield** - The annual income (interest or dividends) divided by the current price of the security, aggregated to the portfolio level.

**Portfolio Yield-to-Worst** - The lowest potential yield that can be received on a bond without the issuer actually defaulting, aggregated to the portfolio level. The yield to worst is calculated by making worst-case scenario assumptions on the issue by calculating the returns that would be received if provisions, including prepayment, call or sinking fund, are used by the issuer.

**Spread Duration** - The sensitivity of the price of a bond to a 100 basis point change to its option-adjusted spread. As the rate of the Treasury security in the option-adjusted spread increases, the rate of the option-adjusted spread also increases.

**Sharpe Ratio** is calculated by finding the portfolio's excess return and then dividing by the portfolio's standard deviation.

**Stock Vega** - The change in the price of an option that results from a 1% change in volatility. Vega changes when there are large price movements in the underlying asset and Vega falls as the option gets closer to maturity. Vega can change even if there is no change in the price of the underlying asset (e.g., if there is a change in expected volatility).

**Swap** - A derivative in which two counterparties exchange certain benefits of one party's financial instrument for those of the other party's financial instrument.

**Theta** - A measure of the rate of decline in the value of an option due to the passage of time. Theta can also be referred to as the time decay on the value of an option.
